

An Affordable POS Solution for Small Retail Merchants

Windows, Apple or Android

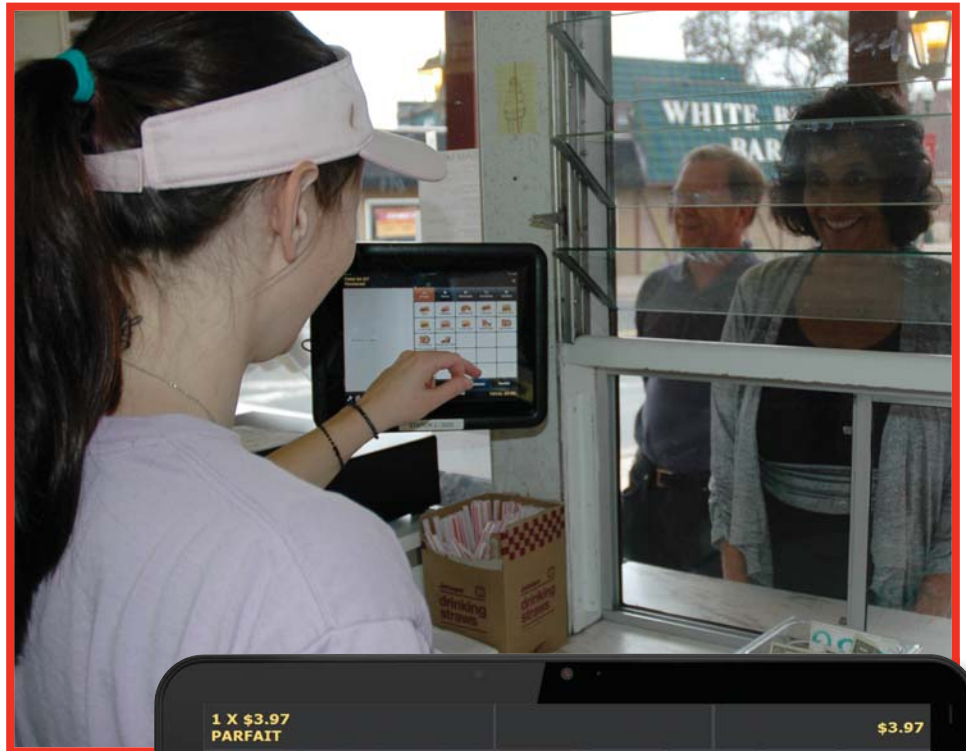

Tabby is a WEB Server integrated in the SAM4S Ellix 40 POS printer and provides a basic retail POS software application. Tabby runs on any browser capable device regardless of operating system, including PCs, mobile devices or tablets. Tabby does not rely on tablet or device resources.

Simple and Smart

Tabby provides features similar to those found on sophisticated SAM4S electronic cash registers. Operation is simple; tablet savvy operators can be trained in minutes.

Local Installation, Support and Service

Tabby is sold, installed and supported through an established network of professional POS dealers. Rely on your Tabby dealer to install your Tabby hardware and the POS peripherals that you require. You can bring your own devices (BYOD) or your dealer can provide commercial grade POS tablets and peripherals.

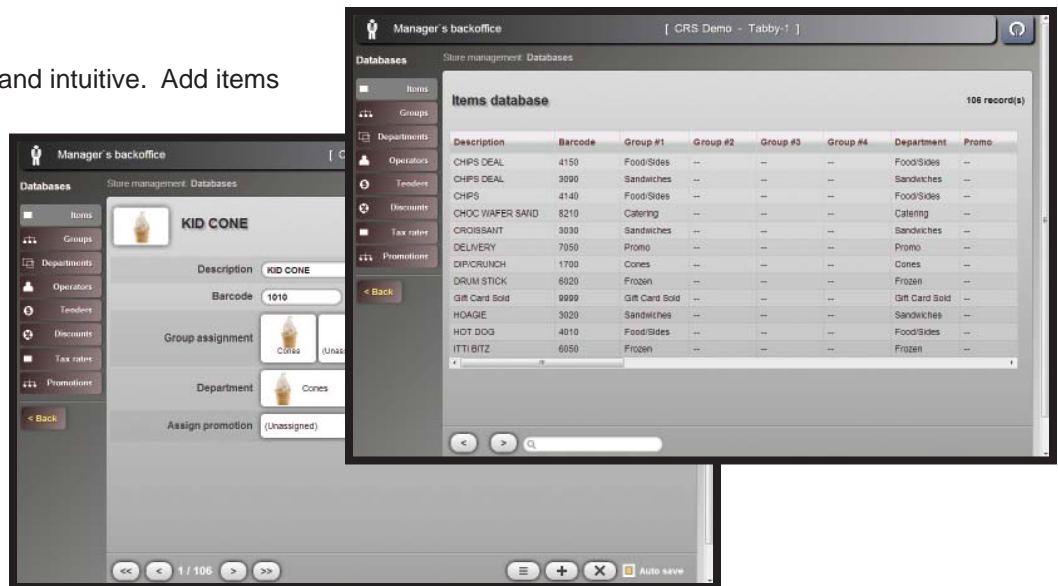

Tabby – An Affordable POS Solution

Easy Setup

Program maintenance is simple and intuitive. Add items or change prices in just a few touches from either the item option screens or from the item database.

Powerful Reporting

Access reports remotely or at the store. Sales are tracked by item, department, time, day and operator. The sales overview dashboard provides a quick look at hourly, day of week and sales by day for the current month.

Detailed reports and charts can be retrieved in seconds.
